

Jeffersonian Tool

The Jeffersonian Tool allows you to create quarter calls quickly and easily with the click of a button.

There are eight pre defined buttons that you can use, but the Jeffersonian Tool is not limited to these.

You can also use the word ALL, this will copy the selected feature, or you can use measurement units such as "NW20AC", which would create a feature out of the North West 20 Acres. Once you have typed in the description of the feature you can click on create button to create the feature. You can also choose to delete the source feature by clicking on the corresponding check box at the bottom of the window.
